

# Breda Energia Environmental Sustainability Project

## Safety and environmental protection:

key values in the Policy of the Breda Energia SpA Safety and Environmental Management System, to be pursued with the participation, awareness, skills and sensitization of workers through the commitment of the Employer and the Manager Delegate for Safety.

## Educate to preserve: let's protect our environment together.

To guarantee workers a safe, clean environment that meets hygiene requirements is the final objective of Breda Energia SpA's HSE Policy, which is achieved in the following objectives:

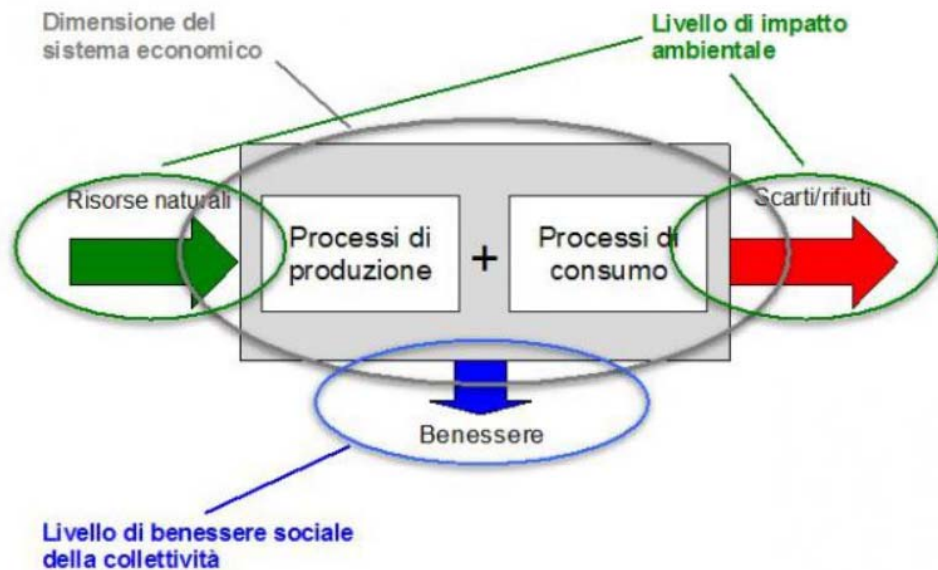

- The improvement of waste management with the continuous increase of those destined for recovery and the optimization of the quantities of special waste destined for disposal.  
The workers are involved in effective separate waste collection in compliance with company procedures.
- The careful use of the consumption of resources: water and energy, which are monitored and evaluated on a quarterly basis for the two Breda Energia SpA sites.
- Attention to the prevention and protection of water resources, soil and air from contamination.

## Why is the environment a priority?

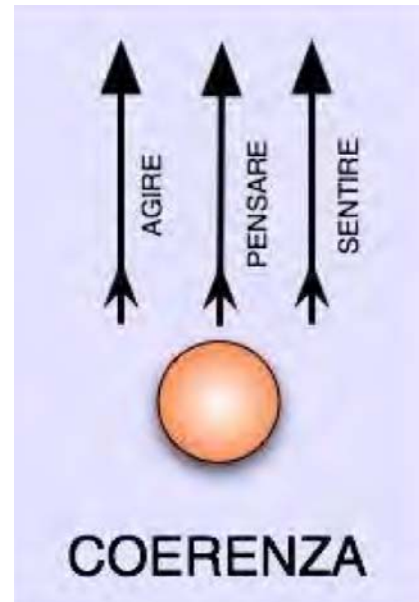

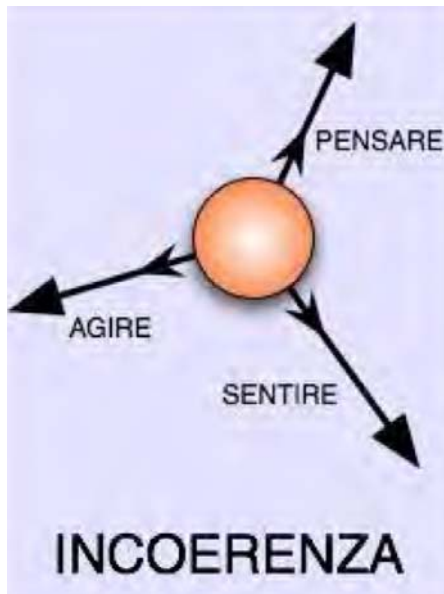

The Environment is where we all meet; where we all have a common interest; it's the one thing we all share

(cit. by Lady Bird Johnson).

## On the side of the planet to give perspective to business

Breda Energia SpA works to pursue the correct use of resources, create economic development by studying ways to make its processes greener and more efficient, reduce consumption and valorise waste from its productions.

## Engagement and awareness

Periodically Breda Energia SpA organizes meetings to comment and share the most significant aspects of environmental sustainability and analyze non-compliant situations and behaviors together, undertaking to quickly implement the necessary corrective actions.

The workers' sensitivity and awareness of environmental issues ensure behavior that is attentive to the conservation of natural resources, both in the company and in daily life.

## Sustainability in the Organization

The concept of Sustainability embraces actions, procedures, behaviors and codes, which we find in specific standards: some mandatory and others voluntary.

Therefore, there are sustainable actions that Breda Energia SpA is already implementing when it complies with certain legal obligations and which contribute to the well-being of operators and the working environment (such as compliance with the contents of Legislative Decree 152/06 – Environmental Code ).

To develop an active approach and build a truly participatory sustainable identity, Breda Energia SpA has acquired the ISO14001:2015 certification.

Only what is measured can be improved
